## Public Value. How to finalize Ministries' inter-institutional performances towards equitable and sustainable wellbeing

Luca PAPI, Riccardo IEVOLI, Giorgia GOBBO, Enrico DEIDDA GAGLIARDO, Fabio BACCHINI

### Abstract:

The Italian budget reform introduced a selection of the BES indicators for the purposes of programming and measuring government policies. However, the Italian PAs seem far from finalizing their performance cycles towards improving these indicators. The paper identifies in the model of the Public Value Pyramid the "organizational and methodological flywheel" that could allow the Italian Ministries to positively influence BES through a coordinated and complementary programming of their inter-institutional performances. The model will be applied to improve the BES related to the containment of the percentage of young people who do not study or work.
